The listing of claims will replace all prior versions, and listings, of claims in the application.

## Listing of Claims:

- 1. (Current Amended) A single pass wash water recycle and recovery system, comprising:
  - a. a container for receiving waste wash water from at least one washing machine;
  - b. a plurality of tanks;
  - c. a lint pulloff filter;
  - d. a multimedia pressure filter;
  - e. a clay filter;
  - f. an activated carbon filter;
  - g. an ozone generator;
  - h. an ultraviolet light source;
  - i. at least one pump for pumping water from said plurality tanks through said filters; and,
  - j. a controller in electrical communication with said plurality of pumps, said pumps associated with said plurality of tanks.
- 2. (Current Amended) A single pass waste water recovery system having at least 75% total wash water recovery system using a ratio of recycle water produced and reused to laundries normal freshwater usage without recycling

3. (Current Amended) A single pass water recycle and recovery system, comprising:

- a. a container for receiving waste water;
- b. at least one tank;
- c. means for filtering lint and other similar size particles;
- d. a multimedia pressure filter comprising at least one tank, each tank containing a plurality of earth media, each media being sized to filter suspended solids of a particular size range;
- e. an activated carbon filter:
- f. means for coagulating particles;
- g. means for disinfecting said waste water;
- h. at least one pump for pumping water from said at least one tank through said filters; and,
- i. a controller in electrical communication with said at least one pump.
- 4. (Previously presented) The apparatus of Claim 3, wherein said lint filtering means comprises at least one pressurized filter bag.
- 5. (Previously presented) The apparatus of Claim 3, wherein said lint filtering means comprises at least one vibrating filter screen.
- 6. (Previously presented) The apparatus of Claim 3, wherein said lint filtering means comprises at least one spinning disk having a plurality of grooves defined thereon.

7. (Previously presented) The apparatus of Claim 3 wherein said coagulating means comprises means for generating ozone and means for contacting said ozone with said water.

- 8. (Previously presented) The apparatus of Claim 3, wherein said coagulating means comprises a polymer coagulant.
- (Previously presented) The apparatus of Claim 3, wherein said coagulating means comprises
  a combination of a polymer coagulant and ozone.
- 10. (Previously presented) The apparatus of Claim 8, wherein said polymer is a cationic polymer.
- 11. (Previously presented) The apparatus of Claim 3, wherein said disinfecting means comprises an electromagnetic radiation source.
- 12. (Previously presented) The apparatus of Claim 11, wherein said electromagnetic radiation comprises ultraviolet radiation.
- 13. (Previously presented) The apparatus of Claim 3, further comprising a clay filter.
- 14. (Previously presented) The apparatus of Claim 3, said apparatus having at least 75% total wash water recovery system using a ratio of recycle water produced and reused to laundries normal freshwater usage without recycling.
- 15. (Currently Amended) A single pass water recycle and recovery system, comprising:
  - a container for receiving waste water;
  - at least one tank;
  - c. means for filtering lint and other similar size particles;

Application No. 10/020,653 Attorney Docket No. 141624.00000

- d. a multimedia pressure filter comprising at least one tank, each tank containing a plurality of earth media, each media being sized to filter suspended solids of a particular size range;
- e. a clay filter;
- f. an activated carbon filter;
- g. means for coagulating particles comprising
  - i. means for generating ozone and means for contacting said ozone with said water, and
  - ii. a cationic polymer coagulant;
- h. a means for generating ultraviolet light for disinfecting said waste water:
- i. at least one pump for pumping water from said at least one tank through said filters; and,
- j. a controller in electrical communication with said at least one pump.
- 16. (Previously presented) The apparatus of Claim 15, wherein said lint filtering means comprises at least one pressurized filter bag.
- 17. (Previously presented) The apparatus of Claim 15, wherein said lint filtering means comprises at least one vibrating filter screen.
- 18. (Previously presented) The apparatus of Claim 15, wherein said lint filtering means comprises at least one spinning disk having a plurality of grooves defined thereon.

- 19. (Previously presented) The apparatus of Claim 15, said apparatus having at least 75% total wash water recovery system using a ratio of recycle water produced and reused to laundries normal freshwater usage without recycling.
- (Previously presented) A process for single pass recycling of waste water, comprising:
  - providing a container for receiving waste water;
  - b. contacting said waste water with a means for filtering lint and other similar size particles;
  - c. contacting said water of step (b) with a multimedia pressure filter comprising at least one tank, each tank containing a plurality of earth media, each media being sized to filter suspended solids of a particular size range;
  - d. contacting said water of step (c) with an activated carbon filter;
  - contacting said water of step (d) with a means for coagulating particles; and,
  - contacting said water with a means for disinfecting said water.
- 21. (Previously presented) The process of Claim 20, wherein said lint filtering means comprises at least one pressurized filter bag.
- 22. (Previously presented) The process of Claim 20, wherein said lint filtering means comprises at least one vibrating filter screen.
- 23. (Previously presented) The process of Claim 20, wherein said lint filtering means comprises at least one spinning disk having a plurality of grooves defined thereon.

DEC. 11. 2003 5:07PM

Application No. 10/020,653 Attorney Docket No. 141624,00000

- 24. (Previously presented) The process of Claim 20, wherein said coagulating means comprises means for generating ozone and means for contacting said ozone with said water.
- 25. (Currently Amended) The process of Claim 20, A process for recycling waste water, comprising:
  - a. providing a container for receiving waste water;
  - b. contacting said waste water with a means for filtering lint and other similar size particles:
  - c. contacting said water of step (b) with a multimedia pressure filter comprising at least one tank, each tank containing a plurality of earth media, each media being sized to filter suspended solids of a particular size range;
  - contacting said water of step (c) with an activated carbon filter;
  - e. contacting said water of step (d) with a means for coagulating particles wherein said coagulating means comprises a polymer coagulant; and,
  - contacting said water with a means for disinfecting said water.
- 26. (Currently amended) The process of Claim 20 (laim 25, wherein said coagulating means comprises a combination of a polymer coagulant and ozone.
- (Previously presented) The process of Claim 26, wherein said polymer is a cationic polymer.
- 28. (Previously presented) The process of Claim 20, wherein said disinfecting means comprises an electromagnetic radiation source.

Application No. 10/020,653 Attorney Docket No. 141624,00000

- 29. (Previously presented) The process of Claim 28, wherein said electromagnetic radiation comprises ultraviolet radiation.
- 30. (Previously presented) The process of Claim 20, further comprising returning at least a portion of said water of step (f) to be used in a system requiring water.
- 31. (Previously presented) The process of Claim 20, further comprising contacting said water of step (c) with a clay filter.
- 32. (Previously presented) The process of Claim 20, said process having at least 75% total wash water recovery system using a ratio of recycle water produced and reused to laundries normal freshwater usage without recycling.
- 33. (New) An apparatus for single pass recycling of waste water, comprising:
  - a. a container for receiving waste water;
  - b. a means for filtering lint and other similar size particles;
  - a multimedia pressure filter comprising at least one tank, each tank containing a plurality
    of earth media, each media being sized to filter suspended solids of a particular size
    range;
  - d. an activated carbon filter;
  - e. a means for coagulating particles wherein said coagulating means comprises a polymer coagulant; and,
  - f. a means for disinfecting said water.

DEC. 11. 2003 5:07PM POWELL, GOLDSTEIN (DTI-19)

NO. 789 P. 14 Application No. 10/020,653 Attorney Docket No. 141624.00000

34. (New) The apparatus of Claim 33, wherein said coagulating means comprises a combination of a polymer coagulant and ozone.

35. (New) The apparatus of Claim 34, wherein said polymer is a cationic polymer
